

# Surge Protective Devices

## SPDN-D Series

UL Type 1

UL US RoHS REACH

## Description

Surge protective devices (SPDs) provide equipment protection from transient overvoltage events lasting micro-seconds. By limiting the overvoltage to the equipment during these events, costly damage and downtime can be mitigated.

The NEMA-style SPDN series for external panel mount is available for 120 V to 480 V nominal voltage sub-distribution board applications.

## Features & Benefits

FEATURES	BENEFITS
<b>More direct modes of protection (L-N, N-G) in a smaller package</b>	Increases protection and design flexibility
<b>Capability to clamp and withstand high-energy transients</b>	Ensures low-residual voltage during high-energy surge events and higher nominal discharge current to prevent disruption, downtime, and degradation or damage to equipment
<b>Stacked Metal Oxide Varistor (MOV) design</b>	Provides more high-transient voltage protection in a compact, multi-layered structure
<b>Installs on the line or load side of the circuit breaker</b>	Simplifies maintenance—without impacting the other parts of the electrical system—by turning breaker off during upkeep
<b>Thermally protected MOV</b>	Eliminates catastrophic failure
<b>External LED indicator</b>	Quickly identifies service requirements to avoid loss of protection
<b>Compact footprint</b>	Offers easy retrofit in existing applications where space is limited
